PHYSICAL DESCRIPTION:

This house is an example of Georgian architecture with several additions. The core is a two story, three bay house with an interior end chimney in one of the gable ends and a small semicircular window in the other. The house, built c. 1801, is clad with stucco. Centered in the middle of the façade, a roof dormer with a gabled roof brings some symmetry to the house. The door is in the first bay and has sidelights and a transom. All windows have shutters. A two story addition to the side of the core is a two bay structure with an exterior end chimney. This addition is also clad in stucco and follows the pattern of windows and the simple cornice of the core. A two story addition off the rear of the core is clad in stucco and has a similar roof dormer and windows as the core. The next rear addition is a frame one story element which leads to a frame two story addition farther back. These last two additions are gabled additions sitting perpendicular to the core.

Classification: The many rear additions make this house a Class II resource.
